Alex Researcher

M.Sc. Student in Computer Science | Example University | City, Country

name@example.com | Website | GitHub

Illustrative template: all names, entries and publications are examples. Replace before applying.

Education

Example University — M.Sc. in Computer Science 2024–2027 (expected)
Thesis: [Your thesis title]. Supervisor: [Name].
[GPA or rank, with the original scale, if useful and accurate.]

Example University — B.Sc. in Computer Science 2020–2024
[Optional distinction or a concise description of relevant training.]

Research Interests

[Example directions: 3D scene understanding, embodied AI, geometric learning.]

Research Experience

[Research project / thesis title] Sep 2025–Present
[Laboratory, institution] | Supervisor: [Name]

- **Problem:** [State the research question and why it matters in one sentence.]
- **Contribution:** [Describe the method or system you personally designed; distinguish your contribution from the team's work.]
- **Evidence:** [Give a verified result, metric, baseline or concrete artifact; link to a paper, code or demonstration when available.]

[Research internship / collaborative project] Jun–Sep 2025
[Research group / company] | Mentor: [Name]

- [Explain the technical challenge and your specific role.]
- [Summarize the result with its evaluation scope; avoid unsupported claims.]

[Additional research project] Oct 2024–May 2025
[Institution / collaborators]

- [A relevant research question or exploratory study.]
- [Your implementation, experiment design, analysis or released artifact.]
- [A finding or limitation supported by your actual evaluation.]

Publications

Bold: applicant; † equal contribution; * corresponding author.

Published Papers

[1] **A. Researcher**†, C. Scholar†, and A. Researcher. "Example: Hierarchical Representations for 3D Scene Understanding". In: *Example Journal of Visual Computing* 12.3 (2026), pp. 100–112.

[2] **A. Researcher** and A. Researcher. "Example: Reproducible Baselines for Geometric Learning". In: *Example Workshop on Learning with Geometry*. 2025, pp. 10–18.

Accepted Papers

[3] J. Scientist, **A. Researcher**, and S. Collaborator. “Example: Geometry-Aware Learning for Embodied Interaction”. In: *Example Conference on Computer Vision*. 2026. accepted.

Preprints

[4] **A. Researcher**[*] and S. Collaborator. *Example: Evaluating Spatial Generalization in Interactive Environments*. Illustrative preprint entry. 2026. URL: https://example.com/preprint.

[5] A. Researcher and **A. Researcher**. *Example: Long-Horizon Research Software and Dataset Documentation*. Author disambiguation example; the first author is a different person. 2024. URL: https://example.com/research-artifact.

Under Review

[6] S. Collaborator and **A. Researcher**. “Example: Physics-Grounded Evaluation of Interactive Scene Models”. Manuscript under review; illustrative entry. 2026.

Honors and Awards

[Scholarship / academic award], [awarding institution] 2026

[Research / competition award], [scope or selection rate, if verified] 2025

[Additional award], [awarding institution] 2024

Technical Skills

Programming: [Languages you can substantiate through your work.]
Research tools: [Relevant frameworks, simulation tools or 3D libraries.]
Languages: [Language and proficiency; certificate score/date if relevant.]

Teaching and Academic Service

[Teaching assistant / academic service role] 2025–2026
[Course, venue or institution]. [One concise sentence about your responsibilities.]

Additional Research Artifacts

[Open-source software / dataset] 2025–2026
[What the artifact enables, your role, and a persistent project link.]

- [Documented functionality or reproducibility contribution.]
- [Evidence of use or validation, if known and verifiable.]

Presentations

[Talk / poster title], [venue; invited or contributed] 2026

Selected Training

[Relevant advanced coursework or methods training, only if it adds evidence not already clear from your degree and research experience.]
